CARE AND CULTURE OF GLADIOLI

Select a sunny location, away from the roots of shrubs and trees; plant 4 to 6 inches deep and 4 to 6 inches apart in a well worked trench in staggered rows. Be sure to keep well watered at all times, also keep the soil loose.

Although our Gladioli are guaranteed to be free from thrips, these insects can be easily transmitted from elsewhere. It is therefore advisable to watch for them when plants are about 3 inches tall and if found, spray weekly with the following solution:

One rounded tablespoon of Paris green
Two pounds of brown sugar
Three gallons of water.

MONTBRETIAS

Unusually graceful flowers, measuring from three to four inches diameter, in shades of sulphur yellow to the most brilliant orange scarlet, on wiry stems two to three feet tall; very useful for the border and for cutting, flowering from August into October.

These bulbs should be treated as Gladioli, but should be planted more shallow, not over three inches deep.
